Sample Paper Two

Jane Researcher, Alex Scholar

1. Introduction

This second fixture exists so live gates can tell two distinct papers apart in the library.
Its title differs from the first fixture, so title-based assertions resolve to exactly one paper.

2. Related Work

Prior systems in this area share the same overall pipeline but differ in how they score candidates.
We review those differences and position this paper against them using the same baseline set.

3. Conclusion

The reported gains hold across every baseline, and the evaluation protocol is released with the code.
